Photo Summary and photos by ANDRES VASQUEZ N., the guide for this tour

Probably my favorite photo from this tour was this one of the minuscule but incredible **Pin-tailed Manakin** (*photo above*)

**OVERVIEW:** The following is a short summary of this year's ATLANTIC FOREST HIGHLIGHTS Birding Tour and it is meant to be a complement to the VIRTUAL TRIP REPORT I created and uploaded to our Tropical Birding YouTube Channel. [Click here for this VTR: https://youtu.be/v4\\_Jbif2Ht8?si=uN2ms6GC-DR43tw3](https://youtu.be/v4_Jbif2Ht8?si=uN2ms6GC-DR43tw3)

The humid forests of Southeast Brazil are home to an array of gaudy birds out of which a relatively large percentage are endemic to these areas. Being in a way an isolated ecosystem nested between the Atlantic Ocean and the large Cerrado in the interior of the country, the narrow strip of forest and mountains that run parallel to the shoreline create the perfect conditions for high diversity and endemism. This trip offers a great opportunity for birders looking for a short tour to see a vast number of the special birds found exclusively here. We racked up 54 Brazilian endemic species (plus various other near endemics) in the seven birding days of this tour.

As an amazing bonus, most of these endemic birds are gorgeous as it is the case of this **Brassy-breasted Tanager** (*photo above*), which was considered one of the favorite birds of the tour. Other big highlights included **Friiled** and **Festive Coquettes**, **Green-crowned Plovercrest**, **Swallow-tailed** and **Pin-tailed Manakins**, **Black-cheeked** and **Rufous Gnateaters**, **Red-necked Tanager**, **Black-and-white Hawk-Eagle**, a ton of **antbirds**, and lots more.

In the following pages you will find a SUMMARY of the best photos I managed to get during this tour but not a detailed narrative of the tour. As mentioned above, details with more photos and videos are available on the full VIDEO TRIP REPORT linked to this document that you can watch in our YouTube Channel, here: [https://youtu.be/v4\\_JbiF2Ht8?si=uN2ms6GC-DR43tw3](https://youtu.be/v4_JbiF2Ht8?si=uN2ms6GC-DR43tw3)

We got this tiny **White-barred Piculet** (*photo above*) near Parque Nacional Itatiaia

**DAY-BY-DAY ITINERARY:** The following is the detail of the itinerary we did in this tour:

<b>24 June</b>	Arrival in Sao Paulo Guarulhos
<b>25 June</b>	Sao Paulo to Biritiba Mirim to Ubatuba
<b>26 June</b>	Ubatuba Area
<b>27 June</b>	Ubatuba Area
<b>28 June</b>	Paraty and Parque Mombucaba to Itatiaia NP
<b>29 June</b>	Itatiaia NP
<b>30 June</b>	Algulhas Negras Road
<b>1 July</b>	Itatiaia NP back to Sao Paulo and departure

**FAVORITE PHOTOS OF THE TRIP:** The following are my favorite pics taken during the tour. They do not necessarily represent the rarest or the most common species; it is just my favorite selection.

One of the first birds we saw was this **Streamer-tailed Tyrant** (*photo above*) which flew right above our heads

*Ferruginous Antbirds (above) are common both in the highlands and in the lowlands. We got this responsive individual at the end of the very first day of our tour.*

*The striking **Blond-crested Woodpecker** (above) is always a big target in the lowlands. This individual seemed to have a very weird tone of yellow on its head, a bit greenish, a bit envious.*

Another of the Brazilian endemics we found in the lowlands was this **Gray-hooded Attila** (above). This loud flycatcher is quite easy to locate thanks to its flamboyant song.

We rarely see a *Black-and-white Hawk-Eagle* (*above*) on this tour but happily we got great views of this individual.

*Red-necked Tanagers (above) are for sure some of the most colorful birds on Earth.*

*An obligate on any trip report of a tour that visits the Ubatuba Area is this **Festive Coquette** (above) which is happily common at the feeders of Sitio Folha Seca where dozens of individuals constantly visit the flowers and feeders there.*

One of the most colorful woodpeckers of the area is the **Yellow-fronted Woodpecker** (*above*). We got a very cooperative family in Fazenda Angelim located in the outskirts of Ubatuba.

Scanning the waters of Paraty we got views of a pair of **South American Terns** (above)

We got some very nice close up views of various species of tanagers during this tour. One that never comes to feeder (and therefore difficult to photograph from close) is the striking **Flame-crested Tanager** (above). We got very nice views of it in Mombucaba.

*Brassy-breasted Tanager (above) was another of the very cooperative birds we found on this trip. Normally it is only a canopy bird and on this itinerary there are no feeders that attract this species. We got lucky with a flock that flew right by us at a view point in Itatiaia NP in the afternoon we arrived there.*

*Pin-tailed Manakin (above) is a bird I see often but it hardly allows you to get close enough and due to its tiny size*

Another of the tiny passerines we found, *Eared Pygmy-Tyrant* (above)

This *Green-crowned Plovercrest* (*above*) was not only a big target but also subsequently one of the favorite birds of the trip

*It doesn't look like much but the **Itatiaia Spinetail** or Thistletail (**above**) is a shy localized Endemic of Brazil*

**FINAL LIST:**

A total of **279** species of **BIRDS** were recorded on this tour. Out of this total, **15** were Heard Only (**H**) with only one species seen only by the Tour Leader (**L**), the Brazilian Endemics are marked with an (**E**). In terms of **MAMMALS**, we recorded only **3** species; this is not a big mammal tour. See the final list below:
